AI (ChatGPT) Assistance POE

I again used ChatGPT as an assistant to streamline the process of coding by using it to troubleshoot errors and offer code snippets to prompt me on how exactly to structure the project without breaking functionality (Being able to access journal entries and uploading to Firestore at the same time without breaking anything). It remained useful for scouring the logcat to find specific errors when running the project and providing me with multiple options on how I can resolve errors. It saved me a lot of time and is a useful tool for pinpointing issues and prompting as well as creating a checklist for me to ensure I did everything in a logical and methodical manner.
